

WHO WE ARE

Mettlehawk Defense USA, Inc. is a mission-driven training and advisory company equipping the American warfighter and allied forces to fight and win in the era of drone warfare and EW conflict. Built on frontline battlefield experience, real-time threat intelligence, and deep fluency in U.S./NATO defense systems, Mettlehawk specializes in uncrewed systems warfare across air, sea, and land domains.

Operating at the intersection of training, intelligence, and operational design, we deliver the tactical edge that prepares the warfighter while advancing force readiness. Our goal is not only to replicate today's threats but to anticipate tomorrow's—ensuring U.S. forces maintain overmatch while allies are prepared for both near-peer competition and asymmetrical conflict environments, where low-cost systems and unconventional tactics can offset traditional advantages.

Mettlehawk is built on battlefield lessons learned in Ukraine and other contested theaters. Our trainers are not theorists—they're combat veterans who have fought in drone-saturated, EW-contested conditions and bring those realities directly into training for U.S. & allied forces.

OUR CORE SERVICE OFFERINGS

Integrated Red + Blue Training

Live, battlefield-informed training where OPFOR realism meets Blue Force adaptation. Deployable teams replicate drone-saturated, EW-contested environments and train units to integrate ISR-to-strike, counter-drone tactics, deception, logistics adaptation, and fires integration into full mission profiles (FMPs).

Stress Testing: Critical Infrastructure & Defense Systems

We replicate adversary drone and EW attacks to expose vulnerabilities in hardened facilities and defense technologies. For infrastructure (bases, ports, depots, or energy sites), our stress tests show how adversaries would attempt to penetrate defenses and provide practical options for remediation. For OEMs, we deliver operator-level feedback, survivability assessments, and export-readiness validation.

System-to-Mission Support

We help drone and EW technology manufacturers move beyond the limitations of traditional Field Service Reps. Mettlehawk develops comprehensive trainings based on frontline TTPs so new systems aren't just operated, but integrated into battle plans.

HORIZONTAL INTEGRATION: MULTI-DOMAIN BY DESIGN

UAVs, USVs and UGVs were once treated as separate silos. That era is over. Platforms now overlap in technology, operators, sustainment, and effects. UAVs mount on USVs and UGVs; all share RF spectrum, control systems, and logistics chains; and their operators and repair teams often work as one. On the battlefield, they also converge in operations—where spectrum deconfliction and mission planning are essential to avoid interference, fratricide, or wasted assets. Mettlehawk is built for this reality. We integrate air, sea, and land systems into an operational ecosystem, training forces to fight the way modern battlefields actually function—interlinked, contested, and unforgiving.

AIR

UAVs: Multi-rotor/fixed-wing for coordinated ISR, FPV strikes, fiber-optics, loitering munitions, swarm tactics, and EW-contested flight.

SEA

USVs: One-way explosive attacks, mine-laying/payload delivery, and defensive training for shipboard, littoral and riverine environments.

LAND

UGVs: Integrated attack payloads, counter-armor threats, supply delivery, casualty extraction, ISR/SIGINT probes, and decoy operations.

OUR DIFFERENTIATORS: THE VERTICAL INTEGRATION LOOP

What makes Mettlehawk different is not just what we deliver, but how we deliver it. Every training cycle is powered by intelligence, translated into doctrine, and sustained through partner capacity building.

- **Intelligence:** We align training updates with the adversary OODA loop observed on Ukraine's front lines, ensuring our clients stay inside the enemy's decision cycle.
- **Doctrine:** Every engagement generates SOPs, manuals, and doctrinal notes aligned with U.S. and NATO standards.
- **Capacity:** We embed lessons into client forces so that new capabilities endure beyond a single training rotation.

WIN WITH METTLEHAWK DEFENSE

The drone war is already here. The forces who win will be those who adapt fastest. Mettlehawk's approach—vertically integrated, horizontally aligned, warfighter-centered—ensures that U.S. and allied forces are not just reacting to today's threats, but preparing for tomorrow's asymmetrical and conventional battlefields.
